# INNOWATCH Overview

## Monitor your world with INNOWATCH

INNOWATCH uses the power of patented real-time visualization technology to help teams monitor and solve problems in their facilities, production lines, data sources and business operations.

Maps, video feeds, computers and data are integrated into a Single-Pane-of-Glass for convenient monitoring, detection and issue notification.

Innovation means a lot of different things to different people. At N3N we believe innovation bridges the gap between the old and the new way of doing things. We do not just innovate to innovate, we do so to make things better.

At N3N we build software that makes people's lives better by providing easy to use software where monitoring, detecting and predicting issues is as easy as turning on a light switch.

**CUSTOMER QUOTE**

Every N3N product has broken new ground and nicely integrated with out own technology platforms.

## N3N customers

Our solutions are run by leading companies from around the world.

### Operational Visibility

Cisco's global business unit which manages ITSM was in desperate need for operation visibility and progressive means to reduce MTTR during critical situations. N3N delivered a complete solution which significantly improved issues detection and resolution.

### Plant Monitoring

Hyundai/Kia motors deployed N3N monitoring and detection in fourteen of its plants around the globe. Hyundai uses N3N's sensor data in combination with video surveillance to detect issues in it's plants. With N3N, Hyundai is able to monitor, detect and prevent issues in all it's plants from one smart control room.

### FAB Monitoring

N3N reduced mean time to detect and resolve issues by allowing operators to perform real-time diagnosis of assembly line servers from a remote-central station. With N3N, LG is able to quickly locate, predict and resolve issues which keeps their production line rolling.

## The path to monitoring success

We see monitoring as a means to achieving better business results. At N3N we believe you need to visualize issues first, then analyze the data.

Our patented pan and zoom technology connected to system maps and your big data make it possible for users to locate problems in real-time. N3N takes the guess work out of monitoring, which enables your company to generate more revenue.
